About BPT Power Cords

Designed to work in concert with our balanced power isolators, CPC and PPC. BPT power cords are hand-assembled in a proprietary configuration using the finest parts available. Our cords improve the sound of any component by producing lower background noise, tighter bass, greater dynamics and finer detail resolution. They look great and custom lengths are available. Power cords may be ordered with 15 or 20-amp IEC and 15 or 20-amp AC plugs.

About BPT Speaker Cables

Our speaker cables use finely stranded, pure copper, Litz wire in a low inductance, low noise design. All models available with spades or banana plugs and are suitable for driving any speaker system.

About BPT Interconnects

The IC-SL (Inter-Connect-Silver Litz) is a design I have had in my head for about 10 years and decided to just-do-it. Like all my designs, it takes form from my own personal sonic taste/desire for clean extended high frequencies (most good cables will give you the sheen or splash of a cymbal but it quickly disappears--with the IC-SL you can hear that splash extend all the way through the recording hall reflecting off of ceilings and walls), clarity in the midrange (most cables loose the individual character of instruments when multiple instruments are played simultaneously in the same frequency range--with the IC-SL you will be able to hear these instruments maintain their uniqueness ! no matter how dense the layering) and articulate bass (most cables blur definition in the midbass destroying the careful tuning of tympani and drum kits). I could not find a wire suitable for my design available from any commercial wire manufacturer or high end audio wire manufacturer so I had to have wire custom made to my specs to reach this goal. Choosing RCA plugs of course took a lot of comparative listening tests with the final choice the pure silver/platinum WBT Nextgen Signature. For balanced XLR connection we use the highly acclaimed Neutrik XLR plugs with silver contacts. The IC-SL maintains a high purity silver path from tip to tip.
